FUNCTION: RESISTANCE TO TETRACYCLINE BY AN ACTIVE TETRACYCLINE BFFLOX. THIS IS AN ENERGY DEPENDENT PROCESS THAT DECREASES THE ACCUMULATION OF THE ANTIBLOTIC IN WHOLE CELLS. THIS PROTEIN FUNCTIONS AS A METAL-TETRACYCLINE/H+ ANTIPORTER. SUBCELLULAR LOCATION: Integral membrane protein. Inner membrane SIMILARILY: BELONGS TO THE MAJOR FACILITATOR FAMILY (ALSO KNOWN AS THE DRUG RESISTANCE TRANSLOCASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DB 1, Length 399;

Toysteine at codon 597 of the type X collagen gene associated with resulting in the substitution of tyrosine by the cysteine at codon 597 of the type X collagen gene associated with schmid metaphyseal chondrodysplasia.";
Thum. Genet. 43.559-56,[1998].
The chondron are the third position of the tripeptide repeating to the third position of the tripeptide repeating to the chains.
The subunit Homorrimer.
The chondron are the third position of the tripeptide repeating to the third position of the tripeptide repeating to the third position of the tripeptide repeating.
The subunit Homorrimer.
The properties at the third position of the tripeptide repeating to the tripeptide repeating to the tripeptide repeating.
The subunit Homorrimer.
The properties at the third position of the tripeptide repeating.
The subunit Homorrimer.
The properties of the tripeptide repeating.
The subunit Homorrimer.
The properties of the tripeptide repeating.
The subunit Homorrimer.
The properties of the tripeptide repeating.
The properties of the tripeptide re
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DISEASE: DEPECTS IN COLIOAL ARE THE CAUSE OF SPONDYLOMETAPHYSEAL DYSPLASIA (SMD). SMD COMPRISES A HETEROGENEOUS GROUP OF HERITABLE SKELETAL DYSPLASIAS CHARACTERIZED BY MODIFICATIONS OF THE VERTEBRAL BODIES OF THE SPINE AND METAPHYSES OF THE TUBULAR BONES. SIMILARITY: STRONG, TO ALPHA 1 AND 2 TYPE VIII COLLAGENS. SIMILARITY: Contains 1 C1Q domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Connective tissue; Repeat; Hydroxylation;

                              The present sequence is an immunogenic portion of a prostate tumour protein. The immunogen, or the DNA encoding it, can be used as a vaccine for the treatment of prostate cancer. The immunogen was isolated from a prostate tumour cDNA library obtained by subtracting a prostate tumour cDNA library with a normal tissue cDNA library.
                                                                                                                                                   Gaps

This sequence is encoded by a human prostate tumour specific gene, and can be used in the method of the invention. The method is for detecting prostate cancer comprises contacting a biological sample with an agent able to bind an immunogenic portion of a prostate protein (such as this protein sequence). An antibody which binds to an immunogenic prostate protein, which binds to an immunogenic monitor progression of, or treat prostate cancers. The antibody may also be conjugated to a therapeutic agent for use in therapy of prostate

The present invention describes isolated polypeptides, comprising an immunogenic portion of a prostate tumour protein (PTP). The polypeptides and polynucleotides encoding them have cytostatic activity and can be used in vaccines and in gene therapy. The polypeptides and polynucleotides encoding them, antigen presenting cells which express

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      181 IDWDTSALAPYLGTQEECLFGLLTLIFLTCVAATLLVAEEAALGPTEPAEGLSAPSLSPH 240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is encoded by a cDNA sequence which was isolated from a breast tumour CDNA library. It is provided in a specification relating to compounds for immunotherapy and diagnosis of breast cancer. Breast tumour antigens and the polynucleotides that encode them may be used in the production of a pharmaceutical composition to be used in the treatment of breast cancer. Proliferated T cells and incubated antigen presenting cells are also required. The polypeptides and polynucleotides may also be used to produce a vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9

the polypeptides, antibodies against the polypeptides and vaccines comprising them can be used for inhibiting the development of prosette cancer in a patient. The polypeptides can be used to generate antibodies or anti-idiotypic antibodies for passive immuno therapy. A portion of reh polymuclectides encoding the polypeptides can be used as a probe or to modulate the expression of the polypeptides. AAA06241 to AAA06591 and AAX82000 to AAX82020 represent sequences used in the exemplification of

derived from them) and antigen-presenting cells expressing the polypeptides. The antibodies are useful for detecting the presence of cancer, especially prostate cancer. The polypeptides, polymucleotides and the antigen-presenting cells are useful for stimulating and/or expanding T cells specific for a tumour protein, and for inhibiting the development of cancer especially prostate cancer. Compositions comprising the polymucleotide and/or polypeptide are useful for stimulating an immune response, and for treating cancer. The Oligonucleotide is useful for detecting cancer. The present sequence is a prostate specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        360

(I) and (II) have cytostatic activity, and can be used in vaccine production and gene therapy. (I). (II), antibodies to (II), fusion proteins comprising (II), and isolated I cells prepared using (I) or (II) are used treat cancer in a patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    RVVPGRGICLDLAILDSAFLLSQVAPSLFMGSIVQLSQSVTAYMVSAAGLGLVAIYFATQ

(I) and the antibodies are also used in the detection of cancer in a patient. The cancer that is diagnosed or treated is particularly prostate cancer. (I) and (II) can be used in vaccines. The antibodies of (I) can be used for monitoring the progression of cancer in a patient. (I) and (II) can also be used to improve diagnostic and therapeutic methods for prostate cancer. They can indicate the level of metastasis as well as the prostate volume. AAH93157 to AAH93944 and AAM01115 to AAM01318 represent polymucleotide and amino acid sequences used in the exemplification of the present invention.

The present invention describes an isolated polypeptide (P1) comprising at least an immunogenic portion of a prostate-specific protein, or its variant. Also described are polynucleotides (N1) encoding (P1). (P1) and (N1) have eytostatic activity and can be used in vaccine production. The polypeptides, nucleic acids and antibodies from the present invention are useful in the diagnosis and therapy of prostate cancer. In agenomic region on chromosome 224112, P704P, P75P and B305D are located in a genomic region on chromosome 224112 known as the Cat Eye Syndrome region. Prostate specific antigen (PSA), P501S was located on chromosome 1. AAH84671 to AAH85143 and AAG99000 to AAG99077 represent polynucleotide and polypeptide sequences used in the exemplification

Isolated polypeptide comprising at least an immunogenic portion of prostate-specific protein, useful in the diagnosis and therapy of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes compositions comprising peptides derived from the Wilm's tumour protein WT1 and methods for their use in treating malignant diseases. Peptides derived from both the murine and human WT1 proteins are provided. The human WT1 gene is found on chromosome 11p13, immunogenic peptides of the invention are particularly useful in the diagnosis and treatment of cancer and leukaemia. The present sequence is a polypeptide described in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             BLALLILGVGLLDFCGQVCFTPLEALLSDLFRDPDHCRQAYSVYAFMISLGGCLGYLLPA 180

(I) have extostatic activity and can be used in vaccine production. (I), prostate tumour antigen polymuclectides, an antigen presenting cell (APC e.g. a dendritic cell) that expresses (I), and a pharmaceutical composition containing (I) are wiseful for inhibiting the evelopment of cancer in a patient. Antibodies ispecific for prostate specific proteins and oligonuclectides that hybridise to a postate specific protein are useful for detecting the presence or a beneave of a cancer or monitoring the progression of a cancer, especially prostate cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to a new polypeptide comprising an immunogenic portion of a prostate protein. The invention is useful for inhibiting the development of prostate cancer in a partient. The invention is also useful as markers for diagnoshing prostate cancer for monitoring diseases progression in patients. The present amino acid sequence represents a human prostate tumour protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            301 YQGVPRAEPGTEARRHYDEGVRMGSLGLFLQCAISLVFSLVMDRLVQRFGTRAVYLASVA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to isolated nucleic acid (ABN81319-ABN81324), accresponding to genes differentially expressed in mast cells following activation or in patients with allergic hypersensitivity disease. (I) that encodes proteins (ABB7756-ABB77575) (II) or a protein fragment of (II) if at least 6 amino acids. (II) is useful for identifying binding partners. (I) or (II) is useful for disponsing or treating a disease state (e.g. allergic hypersensitivity, seasonal rhinits, asthma, urticaria or atopic dermatitis or mastocytosis) in a subject which involves determining the level of expression of (II). A computer system, comprising a database containing information identifying the expression level in a tissue or at least one mast cell of (I), is useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human, mast cell; MC; antiallergic; antiinflammatory; antiasthmatic;
vasotropic; dermatological; allergy; hypersensitivity; rhinitis; asthma.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         contacting a biological sample from a patient with: (a) a binding agent that binds, to a polypeptide having an immunogenic portion of a prostate protein or its variant; (b) 2 oligonuclectide primers, where 1 of the oligonuclectides is specific for a DNA encoding the polypeptide of (a); or (c) an oligonuclectide probe specific for a DNA molecule encoding the polypeptide of (a). The method and polypeptides are useful for polypeptide of (a). The method and polypeptides are useful for progression, and inhibiting the development of prostate cancer in a patient. The polypeptides may be used to generate antibodies useful for the diagnosis and monitoring of prostate cancer. ABG76663-ABG76669 represent human prostate tumour protein sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Detecting prostate cancer comprises contacting a sample with an agent capable of binding to a polypeptide with an immunogenic portion of a prostate protein, oligonucleotide primers or a probe specific for DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 MVQRLWVSRLLRHRKAQLLLVNLLTFGLEVCLAAGITYVPPLLLEVGVEEKFMTMVLGIG
